Reasons for Allowance

Claims 1-53 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Cordoba et al., taken alone or in combination of other references, does not teach or fairly suggest a method or a charge pump comprising, among other things, first and second capacitors having first terminal coupled to a pumped node and a first isolation circuit coupled between the output of the first pumping circuit and the second terminal of the first capacitor, the first isolation circuit isolating the first pumping circuit from the second terminal of the first capacitor responsive to a first logic level of an isolation signal and coupling the output of the first pumping circuit to the second terminal of the first capacitor responsive to a second logic level of the isolation signal (claims 1, 14, and 31); first and second capacitors having first terminal coupled to a pumped node and an isolation circuit operable to isolate the second terminal of the first capacitor during an isolation period following the first pumping period (claims 9, 24, and 41); sequentially changing the voltage at the second terminal of each of the capacitors from the first voltage to a second voltage; and except for a final one of the capacitors, after changing the voltage at the second terminal of each of the capacitors from the first voltage to a second voltage but before subsequently changing the voltage at the second terminal of one of the capacitors from the first voltage to the second voltage, isolating the second terminal of the capacitor (claim 48); and sharing the charge of each of the capacitors being pumped with N other capacitors, the number N decreasing by one as each of the capacitors is pumped (claim 52), as set forth in the claims.
